# WOMEN IN SCIENCE

**MARCH 29**  
NTUA LIBRARY'S MEDIA AUDITORIUM

This March, in honor of International Women's Day, we are organizing a two part event featuring an **online Talk Series** throughout March and a **live Celebration of Women in Science** on the **29th of March** at NTUA's Library Media Auditorium.

Our talk series will highlight the remarkable achievements of pioneering women in science, share inspiring stories, and promote gender equality in STEM.

This celebration will include **expert lectures**, a **poster session & science slams** showcasing graduate research, **speed mentoring sessions**, **interactive workshops** and **kiosks** from collaborating teams and organizations.

## SCIENCE SLAMS

Picture a stage, a scientist, and an audience playing jury – judging the presentation's impact and engagement. In this unique **science communication** format, researchers showcase their work in a **10-minute talk**, to win over the audience. Science Slam is more than a talk; it's a lively display of **cutting-edge research**, breaking down science barriers for everyone to enjoy!

## ONLINE TALK SERIES

We are thrilled to kick off a month-long celebration of **Women in Science** with a compelling online Talk Series.

Throughout March, we will host engaging **discussions**, insightful **presentations**, and inspiring **conversations** with leading women in various scientific fields.

## POSTER SESSION

A Poster Session is a lively celebration of ideas, making science accessible and interactive. Researchers transform their work into vibrant posters, creating an immersive experience for all. It's not just about data; it's a visual feast of innovation. Attendees stroll through like in a gallery, engaging directly with researchers, fostering conversations that transcend the traditional lecture format.

## KIOSKS

A lively showcase of cutting-edge projects and initiatives brought to you by our dynamic network of collaborating societies and organizations. An interactive journey where you can experience, and engage with the forefront of scientific innovation.

## LECTURES

Accomplished women scientists take center stage to share their wealth of experiences and expertise. It's a captivating walk into the minds of trailblazers who've shaped the scientific landscape. From breakthrough discoveries to personal anecdotes, each lecture is a treasure trove of insights.

## WORKSHOPS

Engage in hands-on experiences that go beyond the ordinary, designed to enhance your skills and knowledge. These workshops are dynamic playgrounds where curiosity meets action.

## SPEED MENTORING

A unique opportunity to engage in focused, one-on-one discussions with accomplished mentors, specifically tailored to address your career challenges. In our Mentoring Program, each participant embarks on a series of four 15-minute conversations with different mentors, creating a personalized and enriching experience.

Attendees bring a career challenge or a set of topics they wish to explore, ranging from time management to career transitions. These 15-minute sessions offer a concentrated burst of mentorship, allowing for valuable insights, guidance, and diverse perspectives. It's not just about answers; it's about fostering meaningful connections and empowering individuals to navigate their professional journeys successfully.
